

EXECUTIVE SUMMARY

Horizons & Co presents a content-rich website with strong Google reviews (4.4/5) and adequate lead capture mechanisms, positioning it well for credibility in the Dubai legal market. However, critical technical deficiencies—particularly the lack of SSL certificate and poor mobile performance (8.9s LCP)—undermine user trust and search rankings. Addressing security and performance issues should be the immediate priority before expanding marketing efforts.

HEALTH CHECK OVERVIEW

7

PASSING

8

NEEDS WORK

0

CRITICAL

CHECK	FINDINGS	SCORE
Website Speed WARN	Mobile PageSpeed score of 68/100 is below optimal. LCP of 8,957ms is critically slow (should be under 2,500ms). Desktop performs excellently at 97/100, indicating server-side issues primarily affect mobile users.	6/10
Mobile Responsiveness PASS	Viewport meta tag is properly configured. Mobile PageSpeed of 68 indicates the site is responsive but has performance bottlenecks affecting mobile experience.	7/10
SEO Optimization WARN	Title tag is present but overly long with repetition ('Horizons & Co Horizons & Co'). Meta description at 167 characters is slightly over the 160-char ideal. H1 tag present. Missing canonical URL is a significant SEO gap. Robots meta correctly set to index,follow.	6/10
Google Reviews Rating PASS	Strong rating of 4.4/5 with 57 reviews demonstrates solid reputation. For a law firm, this review volume and rating builds significant trust with potential clients.	8/10
Social Media Presence WARN	Only LinkedIn profile detected. For a professional services firm, LinkedIn is essential but the absence of other platforms (Twitter/X for thought leadership, YouTube for educational content) limits reach.	4/10
Posting Frequency WARN	With only one social profile identified and no clear content freshness indicators, posting frequency appears limited. The substantial website content (20,369 words) suggests content capability exists but may not be leveraged for social.	5/10
Branding Consistency PASS	OG title and description are properly configured for social sharing. Consistent 'Horizons & Co' branding throughout. However, no schema markup detected reduces structured data consistency across search platforms.	7/10
Call-to-Action Clarity PASS	CTA button present, phone number visible on website, and contact form available. Multiple conversion pathways exist for potential clients to engage with the firm.	8/10
Lead Capture Forms PASS	Contact form is present on the website. Email contact available. For a law firm, this provides adequate lead capture, though a dedicated consultation booking form could improve conversion.	7/10
Conversion Optimization PASS	Good combination of CTA button, contact form, phone number, and email. 4.4-star Google rating adds trust. Missing elements: no schema markup for reviews, no SSL certificate undermines trust signals.	7/10
Content Quality PASS	Exceptional content depth with 20,369 words across the site. 41 images and 97 internal links indicate comprehensive coverage of practice areas. This positions the firm as an authority in their field.	10/10
Paid Ads Presence WARN	No clear indicators of paid advertising tracking pixels, UTM parameters, or ad scripts detected. The firm may be missing opportunities for targeted client acquisition through PPC or social advertising.	5/10
Email Marketing Usage WARN	No newsletter signup forms or email marketing platform indicators detected. With 20,000+ words of content, the firm has valuable material for email newsletters but appears not to leverage this channel.	4/10
Trust Signals WARN	Strong Google rating (4.4/5, 57 reviews) builds credibility. However, critical trust gaps exist: no SSL certificate (site runs on HTTP), no schema markup for LocalBusiness or Attorney, which reduces trust indicators in search results.	5/10
Technical Performance WARN	Critical issue: No SSL certificate (HTTP only) — this is a security red flag, especially for a law firm handling sensitive inquiries. No canonical URL risks duplicate content issues. No schema markup. Viewport meta is correctly configured.	4/10

STRENGTHS

- + Exceptional content depth with 20,369 words demonstrating deep expertise across practice areas
- + Strong Google reputation with 4.4/5 rating from 57 reviews
- + Multiple contact pathways including phone, email, contact form, and CTA buttons
- + Excellent desktop performance score of 97/100
- + Well-structured internal linking with 97 internal links supporting SEO and navigation

WEAKNESSES

- No SSL certificate (HTTP only) — critical security vulnerability that damages trust and SEO rankings
- Severely slow mobile LCP of 8,957ms (Google recommends under 2,500ms)
- No schema markup implemented despite being a local professional services business
- Missing canonical URL creates potential duplicate content issues
- Limited social media presence with only LinkedIn detected

OPPORTUNITIES

- Implementing LocalBusiness and Attorney schema markup could significantly improve rich snippet visibility in search results
- Creating a newsletter leveraging existing content could nurture leads and demonstrate ongoing expertise
- Adding Google Review schema to display star ratings in search results could increase click-through rates by 20-30%
- Expanding to Twitter/X and YouTube could establish thought leadership in the UAE legal market

RECOMMENDATIONS

Install SSL Certificate Immediately

The website currently runs on HTTP, which Chrome flags as 'Not Secure.' For a law firm handling sensitive client inquiries, this is a critical trust barrier. Install an SSL certificate and redirect all HTTP traffic to HTTPS. This also impacts Google rankings as HTTPS is a confirmed ranking factor.

HIGH PRIORITY

Optimize Mobile Performance and LCP

The 8,957ms Largest Contentful Paint is nearly 4x Google's recommended threshold. Implement lazy loading for the 41 images, optimize hero images, consider a CDN for the UAE region, and defer non-critical JavaScript. Target LCP under 2,500ms to improve both rankings and user experience.

HIGH PRIORITY

Implement Comprehensive Schema Markup

Add LocalBusiness, LegalService, and Attorney schema types to help Google understand your business. Include aggregate rating schema to display your 4.4-star rating directly in search results. This structured data can significantly improve click-through rates from search.

HIGH PRIORITY

Fix Title Tag and Add Canonical URL

Revise the duplicate title tag ('Horizons & Co | Horizons & Co') to a cleaner format like 'Horizons & Co | Leading Law Firm in Dubai & Abu Dhabi'. Add canonical URLs to all pages to prevent duplicate content issues and consolidate ranking signals.

MEDIUM PRIORITY

Launch Email Newsletter Program

With over 20,000 words of content, you have substantial material for a legal insights newsletter. Add a newsletter signup form to capture visitor emails and nurture potential clients with monthly updates on UAE legal developments relevant to your practice areas.

MEDIUM PRIORITY
